

EMPLOYEE ATTRITION RATE ANALYSIS

IDENTIFYING HIGH RISK DEPARTMENT

ConnectLab

Innovative Solutions

Why is Connect Lab losing employees?

One department is losing employees at a much higher rate than that of the organisation

- Overall employee attrition stands at 16.12% across the organisation.
- The attrition rate seems to be normal overall, but if we look into it at the department level, then it is at high alert for the company

Organisation-wide attrition (2014–2024)

The Industry Overview

- Between 2014 and 2024, the attrition rate fluctuated between 10% to 22%.
- The highest spike is in 2022, when 28 employees quit out of 127, resulting in the highest attrition rate of 22%.
- As overall attrition appears to be stable at the organisation level overall, but a deeper analysis shows a significant concentration of attrition within a specific department.

Department-Wise Attrition

Attrition is not evenly spread across departments.

- The Technology Department has a high number of employees (960) but a relatively low attrition rate of 13.85%.
- The highest number of people leaving in absolute terms, the highest attrition rate: 20.58%, and the highest number of exits out of 447 employees make Sales department the most resultative.
- The Human Resources is not large (only 63 employees), yet it demonstrates 12 exits, and the attrition rate is 19.05% , which is relatively high considering the size of the Human Resources.

In general, Sales Department is the most affected department in terms of attrition rate and volume of attrition, hence the most important area of focus.

Sales Department Attrition Over the Year

The Sales department is very unstable with regard to workforce retention, as the fluctuation in the sales department ranges between 12–32% of attrition.

There is a significant peak in 2015 (30.8%) and 2022 (31.7%), which is the highest rate of all the years.

The number of sales department employees shows fluctuation on a year-by-year basis, but the general direction indicates a consistent problem with retention, especially during high-pressure or transitional years.

The peak of 2022 aligns with the overall peak in attrition for the organisation, which reveals that Sales department is the area causing the company's overall churn.

Who is Leaving the Sales Department?

Sales Executives

- 📍 57 employees left
- 👥 Mostly ages 25–29
- 🏠 High early-career churn

Sales Representatives

- 📍 33 employees left
- 👥 Largest attrition group
- 🏠 Mostly ages 25–29 and under 25

Managers

- 📍 Only 2 employees left
- 👥 Low attrition
- 🏠 Not the source of the problem

Pain Points

Sales department attrition is driven by a cycle of workload pressure, leading to weak work–life balance, which then amplifies career dissatisfaction — resulting in rapid exits.

Work Life Balance

Weak Work–Life balance (50 of 92 leavers were Neutral/Satisfied). Employees leaving the sales department (26 out of 92) were dissatisfied with their work–life balance, which clearly shows that poor work life balance is the strong indicator of attrition

- However, dissatisfaction alone does not explain the attrition— more than half of employees who left (50 out of 92) were Neutral or Satisfied with their work–life balance.

Overtime

Overtime workers experience more stress, extended working hours, and discontinuous schedules, which lead to significantly higher attrition rates. Sales employees working overtime are nearly 3× more likely to leave.

Work-Life Balance

Employees leaving the sales department (26 out of 92) were dissatisfied with their work-life balance, which clearly shows that poor work life balance is the strong indicator of attrition

- However, dissatisfaction alone does not explain the attrition— more than half of employees who left (50 out of 92) were Neutral or Satisfied with their work-life balance.

- Only employees who were very satisfied showed low attrition rate which states that moderate level of work life balance is insufficient to retain the employees

Due to high pressure in the sales department, the employees who were satisfied or neutral were just coping rather than engaging which increases the risk of attrition

SALES DEPARTMENT ATTRITION BY WORK LIFE BALANCE

50 out of 92 leavers were Neutral or Satisfied — not unhappy, but not engaged enough to stay

Overtime

Overtime workers experience more stress, extended working hours, and discontinuous schedules, which lead to significantly higher attrition rates.

The rate of sales personnel quitting after working overtime is significantly higher than that of those who do not. This is validated by the correlation test:

- Correlation between overtime and Attrition: +0.26.
- Signifies moderate positive correlation.
- Meaning: the greater the amount of overtime, the greater the chances of leaving.

A weak work-life balance combined with overtime is the most dangerous group for attrition in Sales Department

	OVERTIME	ATTRITION
OVERTIME	1.00	0.26
ATTRITION	0.26	1.00

CORRELATION HEATMAP OVERTIME VS ATTRITION

Impact of Overtime on Sales Attrition

This chart moves beyond correlation and shows direct evidence.

Sales employees who work overtime leave at almost three times the rate of those who don't, confirming overtime as a key operational driver of attrition

Sales employees working overtime are nearly 3x more likely to leave.

STRATEGIC RECOMMENDATIONS

1. Strengthen Work–Life Balance

- Implement some flexibility in the work times and scheduled holidays.
- Establish parameters in the daily workload.
- Rediscover unrealistic peak–hour expectations.
- Impact: Minimises the issue of disengagement among the Neutral/Satisfied employees (your highest risk group).

2. Reduce Overtime Dependency

- Increase the number or move the monthly sales quotas.
- Install overtime surveillance boards.
- Introduce compulsory recovery days following peak cycles.
- Impact: Reduces directly the 3 x greater risk of attrition among an overtime employee.

3. Improving the early stage onboarding & employee support

- There should be 30–60–90–day check with the human resource manager to make sure everything is going right for the new joinee
- The onboarding process should be for at least 6 months

4. Build a Supportive Sales Culture

- Implement coaching and mentoring by managers.
- Rewards for top performers monthly. Promote free flow of communication and feedback.
- Impact: Enhances engagement and churn down.

Workload pressure fix + professional career = the quickest response that can diminish Sales attrition.

Thank You
